AB The wallboard is prepd. from **cement** 45-55, expanded material
 10-15, **fly ash** 30-35, **gypsum** 4-7,
water 40-55 wt.%, and glass fiber. The manuf. process comprises:
 mixing **cement** with **gypsum** and **fly**
ash, adding expanded material under stirring, mixing with
water to obtain a micro-foamed **slurry** (450-560 kg/m3),
 pouring the **slurry** into a mold, laying a layer of glass fiber,
 putting a mold core into the mold, adding **slurry** to 2/3 designed
 thickness, laying another layer of glass fiber, adding **slurry** to
 designed thickness, settling for 1-1.5 h, removing the mold core,
 de-molding after 4 h, and curing. Preferably, the expanded material is
 expanded vermiculite or perlite;.

ST light wt hollow wallboard strength prodn cost; **cement** light wt
 hollow wallboard; expanded vermiculite light wt hollow wallboard; expanded
